# WHO IS PAT THE CAT ?

**The very first custom sharpness  
calibration chart for 8K cameras ...  
and more.**

Prêt À Tourner offers the world's first range of optical charts with an unrivaled, very high definition printing for this type of product and designed to offer you maximum comfort and speed of execution, thanks to its numerous adjustment tools.

# CHARACTERISTICS & CUSTOM SETUP

All our workshop charts have the following technical characteristics.

All these characteristics - incredible fineness of printing, different targets, circular, linear or star, have been thought out and brought together with a single aim : **the optimization of your calibration test.**

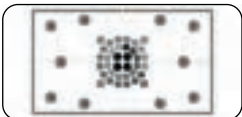

## 250 pairs of lines / mm

The unrivaled printing quality for such kind of large format offers, for the very first time, the opportunity to print up to 250 line pairs on the sensor.

## Circular targets

Find circular targets with different sizes all over the chart. Printing up to 5 pairs of lines on the chart.

## Linear targets

Find linear targets with different sizes all over the chart. Printing up to 5 pairs of lines on the chart.

## Focus sharpness targets

Find many Siemens charts all over the board to manage an easy and quick sharpness calibration.

## Frame leaders

No need to take the chart off the wall to make the frame leader test! The mainframe leaders are on the chart: 1.33 – 1.78 – 1.89 – 2.00 – 2.39.

## Anti-reflective coating

The mat coating of the charts protects the printed ink and avoids any light reflection that could disturb the test. Most of all, you can write on it!

Now, let's customize  
your own chart

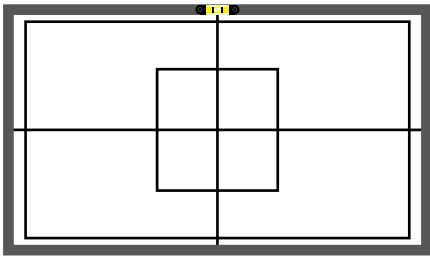

# 1

# CHOOSE THE FORMAT

## 3 different sizes

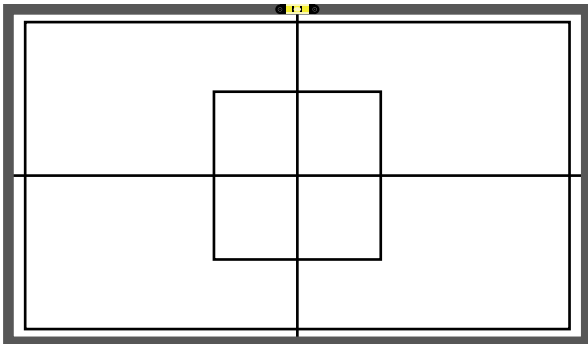

We have developed 3 sizes of charts for you to calibrate your spherical optics : the size of the chart will depend on the sensor of your camera and on your spaces.

### TERA

55 x 90 cm / 20 x 36 in

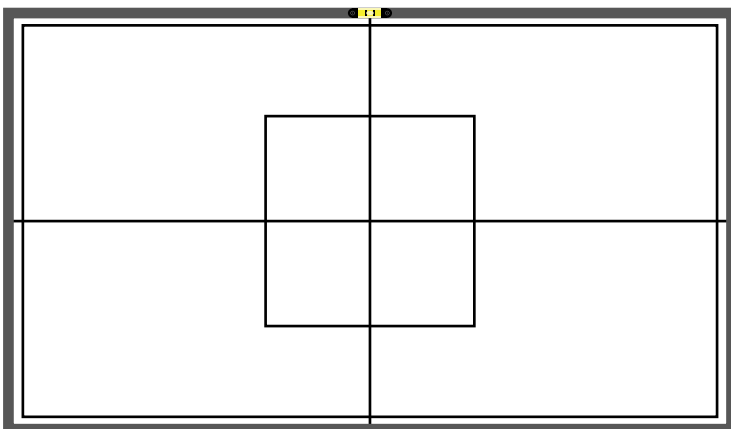

The Tera is perfect for smaller cameras and smaller test spaces while benefiting from the same technical features and options as its 2 big sisters.

### EXA

73 x 125 cm / 28 x 49 in

The Exa chart is perfect for diagonal sensor of about 30/35 mm. It is an excellent compromise for all your cameras.

### YOTTA

92 x 158 cm / 36 x 62 in

The Yotta chart is more suitable for large 8K full-frame sensors with a diagonal greater than 40 mm, as it will cover the entire image at an optimal test distance.

# 2

# CHOOSE THE SUPPORT

## 3 different supports

We propose you the opportunity to choose between 3 different supports : the supports will offer you more or less accessories so to answer the best to your needs.

### GENESIS - Integral self-adhesive support material

Custom branding area  
! printed on the chart

writable coating  
! printed on the chart

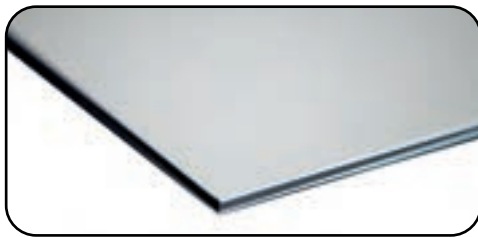

Optical wedge scale  
! printed on the chart

Neutral grey  
! printed on the chart

### LIGHT - Panexpan® 5mm support, light and semi-rigid

Custom branding area  
! printed on the chart

writable coating area  
! printed on the chart

Mirror centering aid

Magnetized support

Optical wedge scale  
! printed on the chart

Color Checker®

Neutral grey  
! printed on the chart

### ADVANCED - Foam board 10mm support and aluminium corner, light and rigid

Custom branding area  
magnetic

writable coating area  
magnetic

Color Checker®

Magnetized support

Optical wedge scale  
magnetic

Mirror centering aid

Aluminium corner

Neutral grey  
magnetic

Bubble level
